

## Parcel Lockers

### Typical Applications

- E-commerce
- Courier business
- Housing estates
- Schools
- Community clubs
- Hotels
- Entertainment parks
- Laundry drop off and pickup

*Actual colors may differ slightly from picture*

### Product Overview

Parcel locker technology is designed with the last mile delivery in mind. Apart from this, parcel lockers are used for storage when necessary in schools, hotels and entertainment parks among others.

Each locker is made of cold rolled galvanized steel, powder coated and electrostatically spray painted to render it rust proof.

Each set of lockers is configured with different size lockers to fit into the space set aside for the locker installation. To mitigate costs, normally standard size lockers supplied by JME are recommended to configure the set.

The locker set is controlled by an industrial PC and Locker Management Software (LMS), which are supplied as a package.

There is a control kiosk unit which houses an interactive monitor for authorization to open and close the locker. Authorization methods supplied by JME include PIN, facial recognition, finger vein, RFID and barcode.

If decoration is required on the lockers, decals can be designed and pasted on the locker surface to blend with the environment.

Several colors are available for the lockers. A set of lockers can be configured to mix and match locker colors, if there is a preference. The choice of colors will be from JME's standard color lockers.

## Product Dimensions

Kiosk A-F02 A-F06 A-F09 A-FLC06 A-FLC10

| Model   | Width (mm) | Depth (mm) | Height (mm) |
|---------|------------|------------|-------------|
| Kiosk   | 550        | 500        | 2050        |
| A-F02   | 460        | 500        | 2050        |
| A-F06   | 460        | 500        | 2050        |
| A-F09   | 460        | 500        | 2050        |
| A-FLC06 | 450        | 530        | 2029        |
| A-FLC10 | 990        | 560        | 1900        |

*This is not an exhaustive list of locker models but the common sizes used by customers. There are other sizes. The model to use will depend on locker numbers and installation space constraint*

## Different types of hasps and locks

Some of the lockers are supplied with locks already built-in while others are installed with the hasp to hold the padlock. The type of lock to install is dependent on the customer's preference.
